### UNDERSTANDING CONCUSSION

#### Some Common Symptoms

Headache **Balance Problems** Sensitive to Noise **Poor Concentration** Not "Feeling Right" Pressure in the Head Double Vision Sluggishness Memory Problems Feeling Irritable **Blurry Vision** Confusion Slow Reaction Time Nausea/Vomiting Haziness Dizziness Sensitive to Light "Feeling Down" Sleep Problems Fogginess Grogginess Lost Consciousness

#### WHAT IS A CONCUSSION?

A concussion is a type of traumatic brain injury that changes the way the brain normally works. A concussion is caused by a fall, bump, blow, or jolt to the head or body that causes the head and brain to move quickly back and forth. A concussion can be caused by a shaking, spinning or a sudden stopping and starting of the head. Even a "ding," "getting your bell rung," or what seems to be a mild bump or blow to the head can be serious. A concussion can happen even if you haven't been knocked out.

You can't see a concussion. Signs and symptoms of concussions can show up right after the injury or may not appear or be noticed until days or weeks after the injury. If the student reports any symptoms of a concussion, or if you notice symptoms yourself, seek medical attention right away. A student who may have had a concussion should not return to play on the day of the injury and until a health care professional says they are okay to return to play.

#### IF YOU SUSPECT A CONCUSSION:

- 1. SEEK MEDICAL ATTENTION RIGHT AWAY DON'T HIDE IT, REPORT IT. Playing or practicing with concussion symptoms is dangerous and can lead to a longer recovery. A health care professional will be able to decide how serious the concussion is and when it is safe for the student to return to regular activities, including sports. Ignoring symptoms and trying to "tough it out" often makes it worse.
- 2. KEEP YOUR STUDENT OUT OF PLAY Concussions take time to heal. Don't let the student return to play the day of injury and until a heath care professional says it's okay. A student, who returns to play too soon, while the brain is still healing, risks a greater chance of having a second concussion. Young children and teens are more likely to get a concussion and take longer to recover than adults. Repeat or second concussions increase the time it takes to recover and can be very serious. They can cause permanent brain damage, affecting the student for a lifetime. They can be fatal. It is better to miss one game than the whole season.
- 3. TELL THE SCHOOL ABOUT ANY PREVIOUS CONCUSSION Schools should know if a student had a previous concussion. A student's school may not know about a concussion received in another sport or activity unless you notify them.
  - Appears dazed or stunned
  - Is confused about assignment or position
  - Forgets an instruction

- SIGNS OBSERVED BY PARENTS:
- · Can't recall events prior to or after a hit or fall
- Is unsure of game, score, or opponent
- Moves clumsily

Slurred speech

**CONCUSSION DANGER SIGNS:** 

In rare cases, a dangerous blood clot may form on the brain in a person with a concussion and crowd the brain against the skull. A student should receive immediate medical attention if after a bump, blow, or jolt to the head or body s/he exhibits any of the following danger signs:

Repeated vomiting or nausea

Convulsions or seizures

- One pupil larger than the other
- Is drowsy or cannot be awakened
- A headache that gets worse
- Weakness, numbness, or decreased coordination

 Becomes increasingly confused, restless or agitated

Answers questions slowly

Has unusual behavior

changes

• Loses consciousness (even a brief loss of consciousness should be taken seriously.)

Loses consciousness (even briefly)

Shows mood, behavior, or personality

#### HOW TO RESPOND TO A REPORT OF A CONCUSSION:

Cannot recognize people/places

If a student reports one or more symptoms of a concussion after a bump, blow, or jolt to the head or body, s/he must be kept out of athletic activity the day of the injury. The student shall only return to activity (practice, scrimmage or competition) with written unconditional permission from an MD, DO, Physician's Assistant or Nurse Practitioner. During recovery, rest is key. Exercising or activities that involve a lot of concentration (such as studying, working on the computer, or playing video games) may cause concussion symptoms to reappear or get worse. Students who return to school after a concussion may need to spend fewer hours at school, take rests breaks, be given extra help and time, spend less time reading, writing or on a computer. After a concussion, returning to sports and school is a gradual process that should be monitored by a health care professional.

Remember: Concussion affects people differently. While most students with a concussion recover quickly and fully, some will have symptoms that last for days, or even weeks. A more serious concussion can last for months or longer.

Concussion Educ. Materials & Acknowledge Form (May 2016)

Parent and Student Must Sign Consent & Waiver on MHSAA Physical Form Acknowledging Awareness

# **CONCUSSION AWARENESS**

## EDUCATIONAL MATERIAL ACKNOWLEDGEMENT FORM

By my name and signature below, I acknowledge in accordance with Public Acts 342 and 343 of 2012 that I have received and reviewed the Concussion Fact Sheet for Parents and/or the Concussion Fact Sheet for Students provided by \_\_\_\_\_\_

	Sponsoring Organization
Participant Name Printed	Parent or Guardian Name Printed
Participant Name Signature	Parent or Guardian Name Signature
Date	Date

Return this signed form to the participant's MHSAA member school. The school should keep this document on file for five years following the student's high school graduation.

Participants and parents please review and keep the educational materials available for future reference.
